

AVAILABLE FOR STRATEGIC ACQUISITION

FalconX Proprietary Algorithmic Trading System

Completed technology asset with proprietary source code and operational OKX integration

A fully developed proprietary algorithmic trading system is available for acquisition by a qualified buyer. The system was built as a production-oriented trading platform rather than a basic retail trading bot. It combines proprietary trading logic, automated execution, risk controls, position management, and direct exchange connectivity.

The owner reports successful connection to OKX and execution of real trades. Supporting technical evidence and the current codebase can be reviewed through controlled due diligence after buyer qualification and a confidentiality agreement.

Transaction Opportunity

Structure	Scope
Full acquisition	Transfer of the system and the intellectual-property rights agreed in the definitive agreement.
Exclusive commercial acquisition	Exclusive commercial control on terms defined by the buyer and owner.
Strategic licensing	A structured license may be considered when it preserves confidentiality and commercial value.

Current Status

Category	Position
Asset status	Complete and operational, subject to buyer verification during technical due diligence.
Source code	Privately owned proprietary source code available within the agreed transaction scope.
Exchange connectivity	Operational integration with OKX, including long and short trading capability.
Price	Price on request. Qualified acquisition inquiries only.

TECHNOLOGY AND TRANSACTION OVERVIEW

System Attributes

- Complete proprietary source code
- Automated algorithmic trading architecture
- Operational exchange integration
- Long and short trading capability
- Market analysis and signal processing
- Risk management architecture
- Position management functionality
- Production-oriented modular design
- Expandable architecture for further development
- Privately owned technology

Suitable Acquirers

The opportunity is intended for organizations and principals able to evaluate quantitative trading technology and complete a professional transaction.

- Proprietary trading firms
- Quantitative trading teams
- FinTech companies
- Digital-asset trading companies
- Trading infrastructure providers
- Investment technology companies
- Entrepreneurs seeking an established algorithmic trading technology base

Confidentiality

This teaser excludes proprietary strategy logic, algorithms, source code, credentials, parameter settings, and other trade secrets. Detailed technical materials will be disclosed only after buyer qualification and a confidentiality agreement. Public transaction materials contain no API credentials or production secrets.

Transaction Process

Stage	Action
1	Initial inquiry and buyer qualification
2	Confidentiality agreement
3	Technical presentation
4	Controlled due diligence
5	Indicative offer and negotiation
6	Definitive agreement and secure transfer
